1916. PRINTED WORK
 DEPARTMENT OF COMMERCE
 BUREAU OF CENSUS

U. S. GOVERNMENT PRINTING OFFICE 1916

Handwritten text, likely a letter or document, written in cursive script. The text is heavily obscured by noise and artifacts, making it largely illegible. Some faint words like "Dear" and "Yours" are visible.

1. The first part of the report is a general
description of the area. It is a large
area of land, mostly flat, with some
low hills in the north. The climate is
warm and humid, with a lot of rain.
The population is about 100,000 people.
The main industry is agriculture, with
rice being the main crop. There are
also some small businesses and a few
factories. The government is a
democracy, with a president and a
parliament. The capital is the city of
Hanoi.

1. *Chlorophyll a* (Chl a) and *Chlorophyll b* (Chl b) are the two main photosynthetic pigments in green plants. They are responsible for capturing light energy and converting it into chemical energy through the process of photosynthesis. Chl a is the primary pigment, while Chl b acts as an accessory pigment, transferring energy to Chl a.

Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 women, 40 to 50 years of age, who were sedentary and had no cardiovascular disease. They were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of 30 minutes of moderate-intensity aerobic exercise. The control group continued with their sedentary lifestyle. The HR and EE were measured at baseline and at the end of the 10-week program. The HR and EE of the training group increased significantly compared to the control group. The results of this study suggest that a 10-week training program can improve the HR and EE of sedentary, middle-aged women.
